- 9.4 0–X Per 1,000 Points . . . 6
- 9.5 Minimum Unit Sizes . . . 6

10 Battle Maps **6**

1 Slow Grow League 2

In this campaign, each participant starts with a small force of 500 points which they add to over a number of weeks and months, turning a small warband into a full 2000 points warhost. Every couple weeks, each participant will play a game against another participant.

In this way, everyone can focus on learning the rules with a small and manageable force, learning the nuances of their faction and the core roles, whilst having time and motivation to paint and build new units.

To add to the fun of playing a series of games, a lightweight narrative system is present where armies gain experience and possibly treasures. We will use custom made maps with special abilities to expand the gameplay.

p.s. This league would not exist if not for the Overseer of the previous campaign, Gunnerside (Eric K), thank you for your help!

2 The Overseer

Chris GenuiTX (Chris Bittner) will be the campaign Overseer, being responsible for keeping track of scores, results, and other miscellaneas. He should be contacted in case of questions, someone wishes to drop, join in progress, or skip a phase's game. The rounds' result must also be sent to the Overseer, so they can update the scoreboard.

3 Phases

The campaign will have 3 week phases where the points increase by 250 points each phase (Phase 5 is extended by one week). The final phase will have 2000 points. This means the schedule will be as follows:

Phase	**Phase Length**	**Points Value**	**Recommended Board Size**
Phase 1	14.09.2026–04.10.2026	500	$30'' \times 44''$
Phase 2	05.10.2026–25.10.2026	750	$30'' \times 44''$
Phase 3	26.10.2026–15.11.2026	1000	$60'' \times 44''$
Phase 4	16.11.2026–06.12.2026	1250	$60'' \times 44''$
Phase 5	07.12.2026–03.01.2027	1500	$60'' \times 44''$
Phase 6	04.01.2027–24.01.2027	1750	$6' \times 4'$
Phase 7	25.01.2027–14.02.2027	2000	$6' \times 4'$

4 Rewards of Valour

At the end of the campaign, certain awards will be given out for first three places.

5 To Battle!

Each participant is expected, but not required, to play at least a single game each phase. Any amount of extra battles in addition to the first may be played against any opponent, but only the first battle contributes Campaign Points and Experience.

Opponents will be assigned using Swiss system. That guarantees that each player will play against roughly equal opponents.

6 Keeping Track

The Overseer will be updating a spreadsheet with standings, pairings, and the phases' mission. Player will need to submit their results to the Overseer. A result consist of:

- game date,
- players names,
- Victory Points,
- Points for killed units and characters,
- Who controlls the treasure (if map had any)
- How much treasure was destroyed (if any).

Everything else is calculated by the Overseer (CP and EXP).

6.1 Scoring

Overseer will compare yous and your opponent difference of victory points you have earned during the match. Your score is based on this differential, see table below.

6.1.1 Victory Points

We will be using the rules for Victory Points from page 19 of the Match Play Guide.

6.1.2 Dead or Fled

- Enemy unit destroyed or fled of the battlefield is worth VP equal to 100% of the cost.
- Enemy units fleeing at the end of the battle are worth 50% of the cost (round up).
- An enemy unit that has been reduced to 25% of its starting Unit Strength or less, or if its Unit Strength is equal to its starting Wounds, to 25% of its starting Wounds or less, is worth VP equal to 50% of the cost.

6.1.3 The King is Dead

If the general is slain or has fled the battlefield, you earn 100 VP.

6.1.4 Trophies of War

You earn 50 VP for every enemy standard claimed as a trophy, page 200 in the rulebook. If the BSB is dead or is fleeing, you earn 50 VP.

6.1.5 Campaign Points

Victory Points Difference	Winner Campaign Points	Loser Campaign Points
0–200	10	10
201–300	11	9
301–450	12	8
451–600	13	7
601–750	14	6
751–950	15	5
951–1150	16	4
1151–1400	17	3
1401–1700	18	2
1701–2500	19	1
>2500	20	0

6.2 Points for killed units and characters & Experience Points

Experience is tracked as a shared XP pool for your army (similar to the Treasure pool).

- Gain 1 XP for every 100 points of enemy units or characters destroyed (e.g. destroying 400 points of units grants 4 XP).
- Gain 1 XP for every 200 points of enemy unit that has been reduced to 25% of its starting Unit Strength or less.
- Gain (or lose) XP equal to your Victory Points difference divided by 100. On a loss this value is negative.

All XP earned over the campaign accumulates in this pool. It may only be spent on options such as Veteran, Poisoned attacks upgrades, the next level of wizard, and similar advancement choices - but not on mounts, armour, or weapon upgrades. Experience points cannot be used together with normal pool, ie. options have to paid fully from one or the other pool. Every XP point corresponds to 1 point used in muster list.

This system is intended to support progression without forcing identical unit composition from phase to phase.

6.3 Treasures

Treasue is gained by controlling objective on the map at the end of the game. Treasures creates a separate pool of points you can spend on items. You must fully pay for these items from that pool; you cannot combine Treasure points with your core army points.

For example, if you have earned 50 Treasure points, you may buy a single item costing at most 50, or several cheaper items totalling 50 or less. You may not buy an item costing 65 by covering the remaining 15 from your core points.

If the character or unit holding a treasure items is destroyed, those items are destroyed and the points are removed from the Treasure pool. If the unit survived till end of the game (or flee), the points spent on those items return to the pool for future battles.

7 Extra Campaign Points

7.1 The Colours of Victory

Whilst victory in battle is the surest way to earn CP, collecting and painting your army is the true objective. Participants earn a bonus 1 CP every battle if their army is painted to a battle ready standard (at least 3 colours).

8 Building an Army

Below 1000 points: Prior to the start of the campaign, every participant must each write a 500 points muster list, as described in the Battle March rules (see below) and submit this to the Overseer. Players should exchange muster lists with each other not later than 2 days before the agreed time of the battle. That should happen simultaneously so that players do not influence own list based on the opponent's one. Above or equal to 1000 points: Use Grand Melee and Combined Arms rules from page 13 of the Match Play Guide.

Additonal rules: - WYSIWYG (loadout): If you units are not 100- Proxy (models): Your opponent should easily be able to see what the unit is supposed to be, if not ask the Overseer before the game. - Legacy armies are allowed but must follow Renegade rules to make themselves more on par with current armies. Link to Renegade Legacy Pack: https://www.squarebased.com/

9 Battle March

The rules that follow are intended to add greater depth to games played using armies of between 500 and 750 points, and as such will be used during the first 2 phases of the campaign. The usual restrictions to army building are still relevant whenever not mentioned. 1000 and above will use Grand Melee and Combined Arms rules from page 13 of the Match Play Guide.

9.1 Minimum Two Units

When writing your muster list for a game of Battle March, your army must include a minimum of two non-character units. This minimum can include war machines, but cannot include units whose troop type is swarms or war beasts.

9.2 Character Limitations

As with any army, an army created for Battle March must include at least one character to act as its General. However, when writing your muster list, you may not spend more than:

- 25% of your army's total points value on a single character.

9.3 Unit Limitations

By their nature, the armies represented by Battle March are unlikely to include huge regiments or large numbers of elite troops. To represent this, when writing your muster list, you may not spend more than:

- 35% of your army's total points value on a single Core unit.
- 30% of your army's total points value on a single Special unit.
- 25% of your army's total points value on a single Rare or Mercenary unit.

9.4 0–X Per 1,000 Points

Players of Warhammer: the Old World will already be aware that many units or options are limited to '0–X per 1,000 points', with 'X' being a number. This means that such options would not normally be allowed when writing a muster list for an army of less than 1,000 points. However, rather than preclude such fun and characterful options entirely, when writing a muster list for a game of Battle March, you may include a single such option. This might be a unit, a character or even an upgrade listed within a unit's options.

9.5 Minimum Unit Sizes

Some units with minimum unit sizes of 10 or higher may be difficult to fit in smaller games. Therefore, any unit with a minimum size of 10 or more instead has a minimum unit size of 5 when playing Battle March games.

10 Battle Maps

Every phase will have common battle map for all players. They will have their own deployment, objectives, special rules and placement of map features.

Deployment rules are similar to what you have seen in other scenarios from matched guide. Objectives sometimes will contain special power, sometimes will contain a treasure that can be win by contesting the objective at the end of the game. Contestation rules will differ from normal GW games and it is possible that units other than core will be able to contest the objective. Map conditions will describe the environment of the battle and any special rules that apply to the map. Scenario goal will sometimes add extra rules to the game or new conditions to win it. As this is slow grow league, we will start slow, and expand the variety as we go.

Map layout will be given before the game by the Overseer. Players may choose following:

- stick to the layout and play as is,
- use scatter dice to scatter selected layout elements or all of them,
- create their own layout by placing elements on the map themselves.

If players cannot agree on the choice use the dice roll to decide.

Example of a map layout can be seen in this campaign: `https://genuitx.com/campaign/war_across_the_siege_of_cliff.html` It takes some time to load but later one is pretty fast. You can see plenty of examples of maps there.
